DETAILED ACTION

Election/Restrictions

1. The Office acknowledges the receipt of Applicants Election of SEQ ID NO: 13 in the paper filed July 16, 2007. In view of this, the restriction requirement mailed in the paper of June 15, 2007 is vacated. However, upon further consideration, a new restriction requirement is set forth below.

Restriction to the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 3-9, 12, and 14-17 drawn to an environmental stress responsive promoter, an expression vector, transgenic plant, transgenic seed and a method of producing a transgenic plant comprising said promoter classified in class 800, subclass 289, for example.
- II. Claims 2, 10, 11, and 13 drawn to an environmental stress responsive promoter, an expression vector, classified in class 536, subclass 24.1, for example.

Inventions of Groups I and II are patentably distinct. Inventions of Groups II does not require a transgenic plant. Furthermore inventions of Groups I and II are directed to different promoter sequences. Furthermore, searching the inventions of Groups I and II together would result in undue search burden. The art search for the inventions of Groups I and II are not coextensive.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Art Unit: 1638

Applicants are reminded that promoters are made up of nucleotide sequences, and different nucleotide sequences are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq.

Applicants are required to elect one promoter sequence from nucleotide sequences of 1-18. In the instant case, for Group I, one of promoter sequence from SEQ ID NOs. 1-8. For Group II, one of promoter sequence from SEQ ID NOs. 9-18.

This requirement is not to be construed as a requirement for an election of species, since each nucleotide sequence is not a member of single genus of invention, but constitutes an independent and patentably distinct invention. Furthermore, the art search for the different sequences are not coextensive but are highly divergent, and would impose an undue search burden, if done together.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
